it is perfectly working, but how to pass the variable without the quotes I found the following function I have to use fgets for the following situation: I have variable called \$contents: \$contents = ""; \$the_contents = \$contents."Some text here".PHP_EOL; \$the_contents = fgets(\$the_contents); \$the_contents = trim(\$the_contents); but now in this case this function fails to get the variable contents which is "Some text here" and other stuff. The battery may be built into the device housing, or it may be located in a battery compartment that is accessible to a user of the device. A cover is typically used to close the battery compartment and protect the battery from damage. Additionally, the electronic device may include a removable electronic device component, such as a memory card, USB device, or other storage device. In some devices, the electronic device component is located in an internal compartment of the device. In some devices, the electronic device component can be removed from the device. The battery is usually enclosed within a case, and a cover closes the case and protects the battery from damage. To facilitate removal of the cover, some electronic device manufacturers have used a hinge in the case that allows the cover to be removed without removing the cover from the battery compartment. Additionally, some cover assemblies use a spring-loaded clip that retains the cover in place. The historical approach to patient safety: using historical methods to study patient safety. The historical approach to studying patient safety focuses on clinicians, systems, and organisational factors that lead to errors in the past. We argue that this approach will require policy-makers and clinicians to continue to pursue the often-postponed question of what made it acceptable to use and tolerate patient harm in the 2d92ce491b
