I have been trying to do this with a different form for my application, and it was super simple. I tried with the Laravel's form helper but I can't seem to get it working. If I load the view without a form model being passed, I get an undefined variable error. The form looks like this (the id is fake for security reasons) {!! Form::open(array('url' => 'validate/subscribe'))!!} 2d92ce491b
