One easy activity that most of us can fit into our schedule without much effort is walking. And it doesn't have to take a lot of time either. Walking is a low-intensity activity and can be done anywhere and anytime. Here are some reasons to start walking as often as you can. Walking Is Good For You 1. Lower Your Risk Of Dementia A study published in The Lancet recently found that walking may delay or prevent memory loss in older adults. The findings suggest that walking 30 minutes a day can reduce the risk of cognitive decline. While more research is needed, the study authors suggest that walking may help prevent certain diseases and conditions linked to dementia. 2. Boosts Mental Clarity A similar study published in the Journal of Alzheimer's Disease found that people who walk for at least 30 minutes a day tend to score higher on mental clarity tests. Researchers believe that walking may boost cognitive function by improving blood flow in certain areas of the brain. You might want to schedule your walks for the morning or early afternoon. Walking for longer periods of time can make you sleepy. 3. May Prevent Heart Attacks
