Oct 8, 2010 Photoshop CS5 Extended, a powerful addition to Photoshop CS5, is available now for the Mac. CS5 Extended is . Category:Adobe Photoshop Category:Photo editing softwareQ: How to download a entire directory from FTP How can I download an entire directory to local system from ftp , I have to take both the files and directories from remote system. I need only files from remote system. I have checked EasyFTPDirectoryDownload, but it seems not to work for all formats. A: This is straightforward in pFTPD (any other FTP daemons are basically the same). You want to use the --directories flag of pFTPD in command mode. You can specify in the command line which directory names you want to download. You have to use this on a daemon side so that the changes will be visible to the system when you reboot. Keep in mind that you may run out of space on the local system! Islet shape selectivity in the neural regulation of pancreatic exocrine secretion. Islet shape selectivity in the neural regulation of pancreatic exocrine secretion was examined using the isolated perfused pancreas of the rat. D-Glucose (10 mM) caused a 27% decrease in pancreatic protein output as measured by the Lowry method. Concomitant with this decrement, fusimotor tone was augmented by about 50%. During electrical stimulation of the vagus nerves, protein secreted and exocrine motor activity were facilitated two- to threefold. This stimulation resulted in a marked (27 to 62%) decrease of pancreatic protein output (from 120 to 80 mg/45 min per rat). Protein secretion decreased to the level of the transected nerve (control, 80 mg/45 min). The selective decrease of secretion and decrease in exocrine motor activity in the presence of nerve stimulation were not accompanied by significant changes in islet morphology, even in the presence of nerve stimulation. These results indicate that a modified signal transduction system operates in the neural regulation of pancreatic exocrine secretion, such that depolarization of the beta-cells of the intact islets leads to a decreased protein output. It appears that the neural regulation of exocrine secretion is mediated by a modification of the transduction mechanisms in the beta-cells, and not by a change in the release of a secretagogue from the beta-cells.
