Giger. Q: How to solve the problem when adding a new property to a JSON with json_encode? I use Symfony 4 and PHP. I have this problem: First, I call a service which returns a JSON with some properties like this: {"success":true, "message":"OK", "data":[{"id":"1", "latitude":"10.123456", "longitude":"10.123456"}]} If I add more properties to this JSON it works. For example: {"success":true, "message":"OK", "data":[{"id":"1", "latitude":"10.123456", "longitude":"10.123456", "cafe":"Cafe"}]} My problem is the JSON is returned with this error: [Semantical Error] line 0, col 12 near 'cafe':"Cafe": Operand should contain 1 column(s) This is my code: public function getJsonTestAction(Request \$request) { \$em = \$this->getDoctrine()->getManager(); \$person = \$em->getRepository(Person::class)->find(1); \$data = \$em->getRepository(PersonData::class)->find(1); \$json = \$this->serializer->serialize(\$person, 'json'); return \$this->render('eventstudioBundle:Person:test.json.twig', ['json' => \$json, 'person' => \$person, 'data' => \$data]); } This is my form: {% form_type="form_test" id="id_test" action = "{{ path('

Details of Necronomicon Information about Necronomicon on the Scholz Presse GmbH. The Art of H.R. Giger. I. Giger is considered to be the most famous of the three alien characters, the third being his own sister, Doris Giger, from the vampire classic film the same title and co-producing the cover of the CD version of the Necronomicon. During a motorcycle accident in Switzerland, Giger had suffered a severe head injury, paralyzing both of his hands. He was thus forced to use a machine to paint.
