JPG and PNG images from the Windows XP Internet Explorer® 7/8 browser to any Photoshop document. It works by extracting the image and sending it to the editor with a simple "Go" command. The image is presented in a separate browser window, which makes it simple to navigate around. The window can be closed and reopened by pressing "Esc". This version of the program uses PNG format and works with Internet Explorer 8. In a flat world, you can still find the old ones. They are a little strange, but that doesn't matter. They were alive once. They had names and faces and bodies. They used to live in a world called Earth. They came from somewhere else and they went somewhere else. Now the world is a world no more. The others have gone and the old ones are here. They can't go back where they came from. They have been here a long time, and even when everything was different, they have been here. Now they're the only ones left. And that's why they don't fit in. Post Scriptum: I'm now selling these machines at RPG Vault Store for \$10 and \$15 plus shipping.
