prebuilt, and electron-native-modal. I need to be able to read the dialog dimensions from one class, and then use it in another. I'm using native-modal to open an Electron dialog. Once it opens I can use the "onWidth" and "onHeight" events to get the dimensions of the dialog. I'd like to be able to use the height and width (or

just width) when it's ready to be closed. First I was thinking I could just use a global variable to store the height and width, but I'm not sure how to get the width and height from the event in the onClose event. Is there a way to do this? I've pasted the relevant code below. // global variable for dialog dimensions let dialogWidth; let

```
dialogHeight; // open
dialog window.onload
= function () { // get
dialog dimensions doc
ument.getElementById("dialog").onwidth =
function (e) {
dialogWidth =
e.target.clientWidth; c
onsole.log(dialogWidt
h); } document.getEle
mentById("dialog").o
nheight = function (e)
{ dialogHeight =
e.target.clientHeight; c
onsole.log(dialogHeig
```

ht); } } // I'm trying to
use the values in the
onWidth and
onHeight
window.onclose =
function ()
