Juli.A Worm Cleaner

Juli.A Worm Cleaner is a feather-light and portable software application designed to identify and remove files infected with the W32.Juli.A worm. It doesn't include complicated options or customization properties, making it accessible to all types of users, even the ones with little or no experience in anti-malware tools. No installation required The entire program's packed in a single executable file that can be saved to a custom directory on the disk or to a removable storage unit, in order to seamlessly launch it on any computer with as little effort as possible. It doesn't need DLLs or other components to work properly, add new entries to the system registry, or create files on the disk without permission. In order to uninstall it, you just have to delete this.exe item. Scan the computer to remove infections The interface of the software utility is user-friendly, represented by a standard window with a plain and simple structure, where you can pick the preferred disk drive from a drop-down menu and start the scanning operation with the click of a button. The tool looks into popular malware hiding sports and indicated the files infected with the Juli.A Worm. They can be removed on the spot, so user intervention is minimal. However, it might be necessary to restart the computer to complete the procedure. On scan completion, you can check out the elapsed time as well as the full path of each suspicious item. Evaluation and conclusion As expected from such a compact tool, it didn't hog system resources in our tests, thanks to the fact that it used a low amount of CPU and RAM to work properly. No error dialogs popped up and it didn't hang or crash. However, you should keep in mind that Juli.A Worm Cleaner doesn't provide real-time protection from this type of threat, so you still need to install an antivirus product to provide round-the-clock security to your PC.Q: How do I add session variables to an existing form in Rails? I have a form that has already been submitted, but I want it to have a hidden field so that if the form is submitted again, the value of the hidden field is kept. Basically, I just need to add the fields to the existing form. A: Add the hidden field in the form and add the same name to the model.
