Development AutoCAD originally ran on the CP/M operating system on IBM-compatible computers. CP/M was a free-licensed operating system distributed with the sale of an IBM computer. CP/M supported a command-line mode (similar to a DOS shell) and an editor, which worked as a graphical user interface (GUI). The original AutoCAD software ran under CP/M in CP/M-based computers. At that time, the CP/M command-line style was not considered user-friendly. The first version of AutoCAD was sold in one-year volumes, with the next version being sold in two-year volumes. Each volume was a complete version of the software, and not a special update, as they often are in software today. After the two-year cycle, the software was sold as shareware and the user had to pay a monthly fee in order to continue using the software. Most original CP/M-based AutoCADs have been converted to a Linux system. When the first CP/M-based AutoCAD was introduced in 1982, it was not very popular. In addition to the command-line style, the display was limited to a text mode with only 72 characters and only 24 lines. The user interface was also cumbersome because most CP/M applications then ran under DOS. The user could only edit one file at a time and the documents could not be shared or archived. The only way to modify the documents was by redrawing the display. To redraw the screen, the user had to close all the other files. AutoCAD was written in BASIC, the first widely used programming language in the computer industry. Although a relatively simple language, BASIC had some fundamental problems, including: all variables had to be declared before use, the programmer had to use ASCII control codes (the German term for it is "Esstisch") for input/output functions, the program had to be terminated by the user entering a single character, and there were no flow control statements. This all resulted in poorly structured programs that were difficult to debug and maintain. Autodesk, however, managed to balance basic programming concepts with ease of use and functionality. Historical milestones 1982 The first version of AutoCAD was released in December 1982 as a desktop app on CP/M computers. It was written in BASIC and ran on the CP/M operating system. The first version was a trial edition
