Q: When should I use objects in hashmaps? I have a question about hashmap. If I know that I can get this kind of output as result, for example, the input is these two elements, (12,5) (12,6) What I get from this code is the expected output, (0,1) (0,2) But, what about this output, (5,1) (6,1) in other words, it's different from the expected output but what is it exactly? I know that "1" is the index of the hashmap so I think "1" is right but what is the meaning of "5" and "6" in this code? import java.util.HashMap; import java.util.Map; public class Main { public static void main(String[] args) { Map map = new HashMap(); map.put
