Sequent also has an Oversampled Distortion unit; a Gate with variable depth and slew and a Panner. Last, but not least, Sequent has a Delay unit capable of sub millisecond delay times, great for creating everything from dub, slapback, and bouncing ball style echoes, to metallic comb filters or flanger effects. Feature Highlights: - Modulate effects using the step sequencer - Use the step sequencer to sequence effects - Cut-up and rebuild audio in realtime - Use Sequent's flexible Looper to create anything from subtle loop variations to micro-programmed glitches - Rearrange effects in parallel, in series, or any other combination you can dream up - Route effects in parallel, in series, or any other combination you can dream up - Create filter modes for FX 1 and FX 2 in parallel - Panner Features: Q, -60dB, and +60dB - Delay time can be set to the sub-millisecond range - Clip length can be set to the sub-millisecond range - The Cut-Up Tool is a great way to create unusual and exciting audio effects Sequent is a very exciting piece of music technology software for modifying audio in a variety of ways. In my mind, Sequent beats Soundtracker in the same category of tools as Cakewalk, with the sound quality of the finished result being absolutely amazing. Sequent's user-friendly interface makes it a joy to use. This program will help you make stereo, mono, and instrumental tracks that you could do it with the minimum amount of effort. The effects are great and the learning curve is very easy to get used to. I would recommend this program to anyone who has aspirations of really getting a great audio effect out of their tracks. Overall this is a very easy and efficient audio track sound editor that I really like. I will say that I had difficulty using the program on my Mac however. It had crash issues which took me a while to figure out. It's a great app for anyone who wants to really get his/her creative juices flowing and add something unique to their tracks. Instantly forget about your existing plugins.
