This study used mixed methods to examine barriers and facilitators of the implementation of community-based and assertive outreach (CBAO) programs in 20 demonstration sites in the National Evaluation of Community-Based and Assertive Outreach (NCB-AO) Study. It assessed the intervention's effects on public mental health service use and patient outcomes in patients with severe and persistent mental illness. Survey data were collected from National Evaluation of Community-Based and Assertive Outreach project sites in 10 U.S. states. The study also used the Short Assessment of Mental Status, a brief screening tool, to evaluate the state of patient functioning. It was used to screen and enroll eligible patients in the study. We evaluated the ability of the study's strategy for identifying and referring patients with severe and persistent mental illness to community-based and assertive outreach services. The study was limited to patients with severe and persistent mental illness. Of the 3,633 patients screened, 2,609 were eligible for the study. Of these, 1,329 agreed

WhatPulse For Windows

WhatPulse is a compact software application whose purpose is to help you keep track of your keyboard and mouse actions, downloading and uploading speed, as well as system uptime. Although it comprises many dedicated parameters, it sports a clean and straightforward layout that lets you set up the dedicated parameters with minimum effort. The "Overview" panel provides general information about the total number of pressed keys and clicks, space usage data, downloading and uploading speed, as well as total uptime details. What's more, the program lets you view the total number of keystrokes and clicks for different periods of time (e.g. today, yesterday, over a month or year), analyze the information in a graph, and check the total number of keys and clicks for each application. WhatPulse reveals details about the IP address, name of the active network interface, current downloading and uploading speed, and bandwidth usage (current, average, and maxim values). Other notable characteristics worth mentioning are represented by the possibility to view data about your computer uptime, total number of reboot sessions, sort the reboot information by date, and check the applications' total active time. When it comes to configuration settings, you can make the utility run at Windows startup, hide automatic popups, perform automatic pulsing operations at a user-defined number of keys and clicks, create an ignore list, as well as set up proxy parameters. During our testing we have noticed that WhatPulse carries out a task quickly, and no errors showed up throughout the entire process. It is quite friendly with system resources, so the overall performance of the computer is not affected. All in all, WhatPulse proves to be a reliable application that comprises a complete suite of tools, and is suitable for beginners and professionals alike. System requirements: Windows XP/Vista/7/8/10 1 GHz processor or higher 512MB RAM 40MB free disk space NOTES: -The trial version includes a 30-day trial period during which WhatPulse sends email and SMS notifications to your phone on the first use. -Privacy Policy, Terms of Service and Contact Us (» Download WhatPulse for free at Visit us on Facebook: Follow us on Twitter: 77a5ca646e
