To the novice user, the interface will seem to be clustered due to the fact that like every professional CAD application, there is a large number of tools that are constantly used and need to be in plain site. The workspace of the application is divided into multiple windows that you can rearrange according to your needs or to improve your workflow. The tools that are used the most are grouped into three pallets: Tools, 2D and 3D. Accessing them you can create a large variety of elements, from a simple line to generating an entire wall on a polygon icon. You can also add images or change camera position and the point of view of the plan. The 3D View Palette is one of the most attractive features of the application. It enables you to explore the designed structure, check for design flaws or
