I am a writer and find it very useful to myself as well as my clients. It is very easy to use and uses a number of features that I use myself. I am a very happy user. The most irritating things on the internet were once simple things; people could leave comments on blogs, chat rooms, bulletin boards... Those days are long gone. Today, people can do anything they want on the internet with little restraint. The web is a place that caters to every ounce of your weird and wonderful. Even your snarky, sarcasm-filled comments can be posted anonymously. And with

blogs, the barrier between authors and readers is virtually nonexistent. Today's internet is thick with trolls, demons, pikes and spams. So how the hell do you keep that crap

System can be seen on the components page. SWOT System videos and demos are available at the product page. Questions and answers about the most frequently asked questions for SWOT System. 1. Why is the risk factor called a weakness? A weakness is a negative factor. For example if you are building a house with a safety management system in place, the house will be safe from fire, but will not be as safe from robbers. The weaknesses of this house are the number of windows and doors, the fact the house is made from brick, poor quality foundations

and it's in a city. 2. Why is the factor called strength? A strength is an opposite of a weakness, for example the house from the last example has a low risk of fire, but a high risk of robbery. Some examples of strengths are:

- The house is a stone and brick house, and has many windows and doors.
- This house has strong foundations, especially reinforced concrete.
- The house is on a quiet lane, away from the main road.

3. How do weaknesses and strengths affect the project? Weaknesses and strengths can affect your project in two ways. A weakness, can affect your project

by preventing you from making the project. If the house has a weak foundation, then you will have to decide whether to abandon the project. A strength, may make the project a success. If the house is on a quiet lane, then the robbers will want the house for its safety and it will be more valuable. 4. Is the risk factor the same for all projects? Yes, the risk factor is usually the same for all projects. The weak points of the previous example are fire, and robbery. 5. Will SWOT System analyse risks and strengths for me? You should define what risk means to you and talk with your

project manager. 6. How can I use SWOT System?
