Apart from the main window, the application offers you to specify the URL where you want to create the shortcut, the name, the icon, the target window (program), the time in seconds it will expire, the command line arguments, the command (if you need it), the security level (optional) and the browser type (optional). The link can be created, customized or deleted just by clicking the appropriate buttons. We tested Launchy in the Windows environment and did not experience any compatibility problems, despite the fact that we were able to add or modify the parameters in the text field. Our opinion Given its functionality and user-friendly interface, Launchy was a piece of software we enjoyed using thoroughly, mainly because it took away a lot of the hassle that you encounter when you try to create a shortcut manually. While less than ideal for advanced users, you can put to use Launchy for creating new shortcuts for you and quickly exploring new websites without having to open the web browser for any reason. All in all, Launchy is a great, unobtrusive tool that takes care of the difficult task of creating shortcuts for you. Ease of use: Target: Ease of use: Sophos Anti-V

This package provides 3rd party drivers for HFS+, NTFS, and EXT4 file systems. For more information on the specific distributions included in this package, please see the distribution files included. It's a free, relatively lightweight, and handy tool that has many powerful features. It can also be a good productivity booster for those who use the default Windows 8's desktop, known as the Modern UI. Set the display size and orientation Windows Flip 3D allows you to switch any window and its content (usually applications) to your preferred screen, as well as screen orientation. It doesn't matter which type of mouse and other peripheral devices you use - you can easily do a proper calibration and scroll along with them. Windows Flip 3D can be activated both from the [start] menu and Windows Flip 3D button in the system tray. The program has a limit of three simultaneous virtual screens (Windows don't like this, but there's no other solution). The application has two modes, simple and advanced. In the former, you can preview how the window will look after the flip. In the latter, you can see the window's content in its new orientation. Slide to switch a window to the left or right with the mouse Windows Flip 3D 3D allows you to switch any window to a new location and orientation. The window will appear in a new window, moving to the position specified by the mouse. This is not a very convenient solution if you need to switch two windows at a same time, but if you want to have more than one window visible at a time, this tool may be what you want. In addition, to switch a window from left-to-right with the mouse, double-click on the left edge of the window, without activating the window. The application has one mode, simple. It allows you to preview how a window will look after the flip. Add a hand cursor to any window If you want to show a hand cursor (sometimes referred to as an "index" cursor) to the user of the window that you're switching, set the cursor to hand. To set the cursor to hand, right-click on the edge of the window, and choose Hand (mouse cursor icon) from the contextual menu. The left mouse button will appear on any window that's open, and the windows will snap to place. Move any window Once your mouse is over an edge of the window, simply click b7e8fd5c8
